

DWA_07.4 Knowledge Check_DWA7

1. Which were the three best abstractions, and why?

createPreviews.js

- checkCurerntFilters()
- assignCurrentFilters()

They all have a single responsibility

Helpers.js

- generateHTML()

It has a single responsibility and can easily be reused for different reasons

2. Which were the three worst abstractions, and why?

Helpers.js

- assignExtractedBooks();
- generateBooks();

They have several responsibilities. They are also not very reusable.

3. How can The three worst abstractions be improved via SOLID principles.

By breaking them apart into smaller functions and separating concerns so that there is less responsibility that falls on them
